

Fitting the Front Sight

This front sight is designed to slip over the front sight band on a factory 10/22 barrel. However, Every now and then (rarely) the factory barrels have a front sight band that is slightly too large in diameter. In this case the new front sight may fit too tightly or not at all. If this happens to you, we have a solution...

Call 800-950-9088

We'll send you another front sight that has been modified to fit the larger diameter front sight band.
